

Thermo-Treated Wood Planters

Pamper your flowers...

Thermally modified hardwood Planters/Raised Garden Beds for vegetables and flowers are easy to assemble without any tools or fasteners. These planters look like a fine piece of outdoor furniture, rather than rough pine construction boards forgotten by builders in your yard. The construction consists of two types of parts: Sideboards with dovetail tongue and Corner Posts with dovetail grooves, which can be combined to create multiple configurations as all parts are compatible.

Ten sizes of Planters:

2'x2', 2'x4', 4'x4', 2'x8' and 4'x8' (each size in two heights: 6" and 12")

Three sizes of Cachepots: 6"x6"x24", 6"x6"x48" and 18"x24"x24"

The Magic of Thermo-Modification

The benefit of thermo-treatment of wood is that the process leaves the wood naturally protected against decay on a molecular level while beautifying the wood by giving it that deep exotic look. It is a 100% green product. Also, our planters don't need liners to protect plants from harmful chemicals.

The latest research also shows a beneficial influence of thermally-modified wood on plants and vegetables. In addition, thermally-modified wood has a natural resistance to termites, insects, and bacteria, adding additional protection for your plants.

ThermA Planters are made from thermo-treated wood. It's a 100% "Green" product!

Assembly Tips

1. Slide posts to both sides of two side boards from top.

2. Slide two other side boards to tie the construction. If higher than 6", add more side boards.

3. If use hammer, put a piece of wood to hit

Warranty

Thermo-treated wood is naturally protected against rot and decay for 25 years. Nevertheless, the original appearance of the product depends on timely maintenance and usage as directed. We hope you'll enjoy the product for a long time!
