

Thermo-Treated Wood Accent Wall Planks

Made in the USA, Therma Planking is an innovative, real wood product that enhances any space with its stylish finishes and superior quality. Using thermal modification of wood (a proprietary Green Technology) makes this paneling free of bacteria and insects with increased dimensional stability. Installation is made easy with DIY kit included in each box.

About Thermo-Treatment of Wood:

Thermo-Treated Wood is exposed to extremely high temperatures (400 degree Fahrenheit) with no chemicals added. It is a 100% "Green" product. The process accelerates the aging of wood to make it similar to 350-year old lumber. It eliminates all moisture, resins, sugars, organisms, and bacteria in the wood. In opposite to reclaimed lumber our product is free of any insects and bacteria. The planks are perfectly milled and due to thermo-treatment, they will not be shrinking, cupping and moving on the wall.

Applications of Wall Planks:

Use planks as accent walls, wainscoting, wall tiles, ceilings, wall art, headboards, underbars, upgrades for furniture and doors, and many others. Due to thermo-treatment you may use our planks in high humidity environment, such as bathrooms, kitchens, basements, pool areas, light backsplash areas; and even outdoors (under roof): terraces, patios and balconies.

Features:

- ★ No chemicals, bacteria or insects in the wood, 100% Green, pure and safe
- ★ Thermo-treated planks will not be cupping, twisting or moving on the wall
- ★ No acclimatization is needed before installation
- ★ Thermo-treated wood is identical to 350-year old lumber!
- ★ Thermally-treated wood has improved fire rating (Class B)
